

WNYRIC Network Diagram	
TITLE:	High Level - Future
ISSUE:	1.0
DATE:	10/03/2014

This design is a small subset of reality, from the District/BOCES it is replicated for the number of school districts in the WNYRIC Network. All Districts/BOCES will have a 1GB connection to the WNYRIC Network, either terminating at the WNYRIC or our DR Site. All traffic will flow through the WNYRIC or DR Site. At the District level, the internal schools are all connected with 1GB links back to the main District building. The Regional BOCES are treated the same as all other Districts.

This depiction would be replicated across all Districts and BOCES. There is the possibility of increasing these links on a district by district basis and analysis.
